

HAWORTH®

Growing Knowledge

The Evolution of Research Exhibition

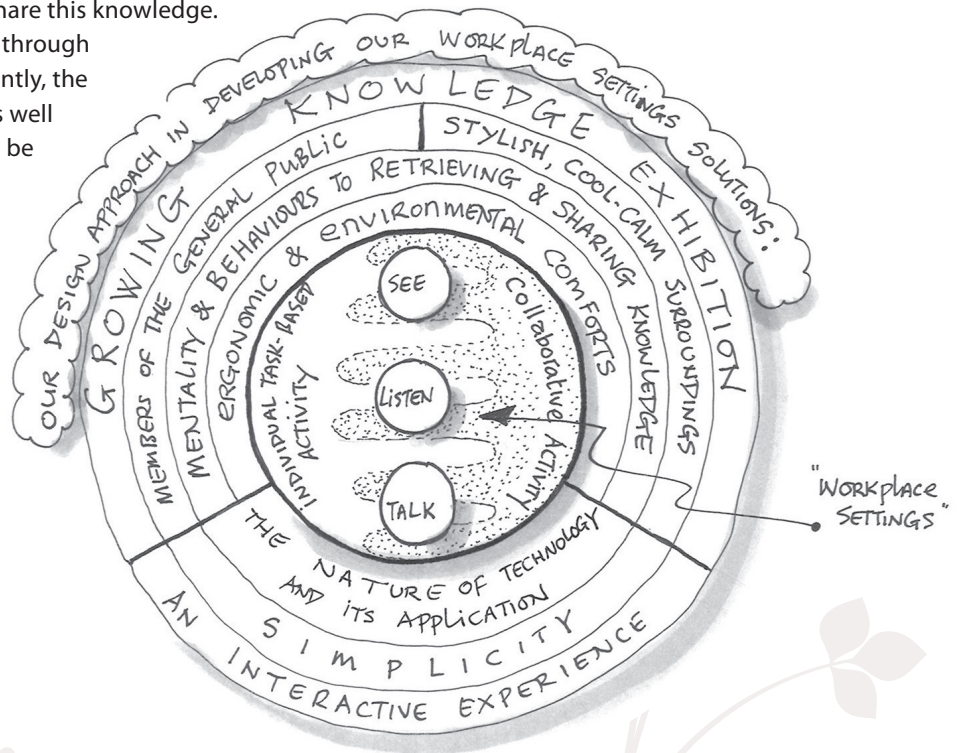

The Aims and Objectives

Haworth has partnered with the British Library, JISC, UCL's Ciber Research Group and Microsoft, HP and Sony to showcase some completely original research tools, thought-provoking content and futuristic design in a fully interactive research environment. The exhibition aims to challenge our audiences on how research is changing and ask what they want to experience from the library of the future.

Our Design Approach

The environmental setting solutions evolved from Haworth's approach in recognising there is an intrinsic balance between the types of technology that deliver information and how individuals or groups choose to retrieve, store or share this knowledge.

The way this is carried out is expressed through different forms of behaviour. Consequently, the design and specification of furniture, as well as other elements, such as lighting, will be significantly influenced by these and other considerations in providing varying degrees of posture comfort and privacy found in the different environments.

The Conceptual Exploration

The Realisation

Our Organic Workspace approach creates flexible interiors that change with a customer's organisational needs over time. Our customer solutions are born out of our history, knowledge and design point of view. This is what we mean by an Organic Workspace approach.
